NewGenn Ltd

By:

NewGenn System Sanitise

This product automatically goes in to the washing at the fabric conditioner stage.

It provides a final sanitising effect by killing any bacteria remaining in the wash at that stage.

System Sanitise is a more concentrated version of the High Level Disinfectant Concentrate.

When diluted in use it is very safe on skin.

In fact it becomes equivalent of NewGenn Foam Hand Rub which is used very widely in the care and food sectors and on the skin of tiny babies and the elderly.
