CONNECTED COTSIDE BUMPERS

The latest in patient care...

- Overcomes entrapment issues
- Reduces risk of limbs becoming caught
- Works in conjunction with profiling beds
- In stock for immediate despatch

These cotside bumpers have been specifically designed to overcome entrapment issues and feature a mesh connecting sheet that runs beneath the mattress/bed to connect the two cotsides together. This helps to reduce the risk of a patient's limbs being caught between the cotsides and the bed frame.

These cotside bumpers are manufactured to work in conjunction with electric profiling beds, still allowing for the head and footrest to be effectively operated. They cover the full length of the bed rail and will suit the majority of beds with two bar integral wooden bed rails.

- Dimensions: 200 x 86cm
- Wipe clean material with Velcro fastening (no mesh section between the rails)
- Will cover the full length of a standard bed rail
- Supplied in pairs

EHOB CUSHION

Continuing to protect your patient is important for the full continuum of care. The EHOB WAFFLE Cushion provides your facility with a high quality, convenient solution that uses clinically-proven static air technology. This redistribution of pressure contours and cradles the patient while the venting holes allow for adequate airflow, all contributing to patient comfort and pressure injury prevention.

- 1. Venting Holes:** Allow for airflow and moisture venting to keep patients cool, dry and comfortable.
- 2. Proprietary material:** Engineered for patient comfort and safety. Antimicrobial agent is blended into the material.
- 3. Low profile.**

EHOB MATTRESS

The EHOB WAFFLE Overlay is your first line of defence for pressure injury prevention. The design provides the caregiver a point-of-care solution with the versatility of patient handling and transferring, encouraging ease of use and compliance. The venting holes allow for airflow to keep patients cool, dry and comfortable.

- 1. Straps:** Secure the overlay in place for patient safety and security.
- 2. Easy-grip handwells:** Facilitate easy turns and transfers.
- 3. CPR valve:** Quickly deflates for overlay emergencies.
